SUMMARY

AI Engineer and Full-Stack Developer specializing in production-grade LLM integration, MCP server development, and agentic workflow automation. Builds real tools that solve real problems — from OAuth2-secured MCP servers connecting Claude AI to healthcare APIs and construction billing systems, to full-stack health platforms with real-time CGM data analysis. Proven 90% reduction in operational overhead through AI deployments built on TypeScript, Next.js, Node.js, and PostgreSQL. Strong bias toward clean architecture, type-safety, and systems that scale beyond prototypes.

TECHNICAL SKILLS

Core Languages: TypeScript · JavaScript · Python · Go · SQL · HTML/CSS

Frontend: React · Next.js · TanStack Router · TanStack Query · Tailwind CSS · Framer Motion

Backend & APIs: Node.js · Fastify · Express · REST · GraphQL · Webhooks · Background Jobs

Databases & ORM: PostgreSQL · pgvector · SQLite · Drizzle ORM · Prisma · Upstash Redis

AI & LLM Engineering: Claude API · OpenAI API · MCP Protocol · AI Agents · Tool Calling · RAG · Pinecone · Whisper API

Auth & Security: OAuth2 · JWT · iron-session · Clerk · Zod · Type-safe validation

Infrastructure: Git · Docker · Linux · GitHub Actions · CI/CD · Vercel · Vite · npm · Vitest

EXPERIENCE

Technical Project Manager & AI Automation Engineer

Feb 2020 – Present

Long & DeLosa Construction Group · Brooklyn, NY

- **MCP Server Architecture:** Designed and shipped production TSheets/QuickBooks Time MCP server with full OAuth2 flow, reducing manual timesheet-to-billing processing by 90% and enabling Claude AI to extract, format, and route construction job notes directly into Sage 100 Contractor.
- **Agentic AI Deployment:** Embedded Claude AI and Claude Code into core operations — automating invoice generation, document processing, and field-to-office communication pipelines using Next.js/React frontends with PostgreSQL backends.
- **Field Notes PWA:** Built internal Next.js PWA with OpenAI Whisper bilingual voice transcription (English/Spanish), role-based auth via iron-session, photo capture with client-side compression, Upstash Redis persistence, and direct Google Chat integration — eliminating manual data entry for 50+ field supervisors.
- **Full-Stack Automation:** Developed type-safe automation tools with TypeScript, Zod validation, and PostgreSQL for construction workflow tracking, project management, and billing systems.
- **Platform Administration:** Owned Bluebeam and Procore Technologies environments for 50+ users including permissions, workflows, integrations, and system configuration.
- **Process Engineering:** Built Excel/VBA macros cutting billing cycle from 30 to 5 minutes; designed LLM pipelines converting unstructured field notes into polished client reports.

NOTABLE PROJECTS

Peloton MCP Server github.com/cykj40/Peloton-MCP-Server

TypeScript · Node.js · MCP SDK · SQLite · Zod · Axios · Vitest

- Production MCP server correlating Peloton workout history with real-time Dexcom CGM blood glucose data for Type 1 diabetes management. Features JWT Bearer auth with auto-refresh, SQLite persistence, muscle group impact analytics, delayed hypoglycemia risk detection, and discipline-level glucose pattern insights. Ships with 55 tests across 9 test suites (Vitest) and an in-memory cache layer with rate-limit-aware retry logic.

Dexcom MCP Server github.com/cykj40/dexcom-mcp-server

TypeScript · Node.js · MCP Protocol · OAuth2 · SQLite · Claude API

- MCP server connecting Claude AI to Dexcom CGM devices for intelligent diabetes management. Implements adaptive metabolic modeling that learns insulin sensitivity over time, predictive intelligence for glucose impact estimation, parameter drift detection, and AGP visualization. Local-first architecture — all data stays on-device. Full OAuth2 for secure Dexcom API access.

TSheets / QuickBooks Time MCP Server github.com/cykj40/Tsheets-MCP

TypeScript · Node.js · Express.js · MCP Protocol · OAuth2 · Zod · TSheets API · Claude API

- Production MCP server enabling Claude AI to interact with the TSheets time-tracking API. Handles OAuth2 token management, hierarchical job structure parsing, and type-safe data extraction with Zod — cutting timesheet-to-Sage-100-Contractor billing from 30 minutes to under 5.

Diabetes AI Agent github.com/cykj40

Next.js · TypeScript · Fastify · PostgreSQL · Prisma · GPT-4o · Pinecone · JWT

- Full-stack health platform with real-time Dexcom CGM integration, AI-driven glucose trend analysis, RAG-powered health Q&A via Pinecone vector store, JWT auth, and nutrition/workout tracking with interactive Recharts visualizations.

Health Journal AI github.com/cykj40/journal-ai-app

Next.js · TypeScript · Claude API · PostgreSQL · Drizzle ORM · Clerk · Recharts · Tailwind

- AI-powered health journaling platform using Claude as the core reasoning layer. Log mood, sleep, vitals, and nutrition — Claude identifies patterns, flags anomalies, and surfaces actionable insights via a conversational chat interface with time-series visualizations.

T1Copilot github.com/cykj40/t1pilot

TypeScript · Next.js 15 · Vercel AI SDK · LangGraph.ts · Claude API · MCP Protocol · Drizzle ORM · Neon Postgres · PGVector · Turso · Zod · Fly.io · Vitest · Laminar

- Production multi-agent AI system for real-world T1D management. A 7-agent graph (Orchestrator, Glucose, Exercise, Modeling, Event Logger, Research, Insight) reasons over live Dexcom CGM readings, Peloton workout data, insulin events, and carb intake simultaneously. Built on Next.js 15, Vercel AI SDK streaming chat, LangGraph.ts, Drizzle ORM, Neon Postgres with PGVector, and two production MCP servers on Fly.io. Full HITL gate on all medical writes — no agent autonomously logs insulin or modifies parameters. Self-hosted BYOD architecture.

EDUCATION & CERTIFICATIONS

Rutgers University Coding Bootcamp

2022–2023

Full-stack development, MERN stack, RESTful APIs, Git, testing methodologies

Santa Monica College · A.S. General Sciences

2018–2020

Mathematics through Calculus I, Chemistry, Biology, C++ programming fundamentals

Frontend Masters · Frontend & Fullstack Engineering

2023–Present

459+ hours — React, Next.js, Node.js, PostgreSQL, algorithms, performance optimization

Certifications

- DeepLearning.ai — Open Source Models with Hugging Face · Knowledge Graphs for RAG
- Kaggle — Python · Machine Learning · Pandas · Intermediate Machine Learning
- IBM — Web Development Professional Certificate
- Procore Technologies — Project Management · Field Productivity · AI in Construction
- FreeCodeCamp — JavaScript Algorithms & Data Structures · Front End Development Libraries
- Rutgers University — Full-Stack Coding Bootcamp (December 2022)
